Any information contained in this document must not be construed as business advice. No consideration to trade should be made without thoroughly understanding and reviewing the risks involved in such trading. If you are unsure, you must seek professional advice on the same.

In considering whether to trade or authorize someone to trade for you, you should be aware of or must get acquainted with the following:-

1. BASIC RISKS:**1.1 Risk of Higher Volatility:**

Volatility refers to the dynamic changes in price that a security/derivatives contract undergoes when trading activity continues on the Stock Exchanges. Generally, higher the volatility of a security/derivatives contract, greater is its price swings. There may be normally greater volatility in thinly traded securities / derivatives contracts than in active securities /derivatives contracts. As a result of volatility, your order may only be partially executed or not executed at all, or the price at which your order got executed may be substantially different from the last traded price or change substantially thereafter, resulting in notional or real losses.

1.2 Risk of Lower Liquidity:

Liquidity refers to the ability of market participants to buy and/or sell securities / derivatives contracts expeditiously at a competitive price and with minimal price difference. Generally, it is assumed that more the numbers of orders available in a market, greater is the liquidity. Liquidity is important because with greater liquidity, it is easier for investors to buy and/or sell securities / derivatives contracts swiftly and with minimal price difference, and as a result, investors are more likely to pay or receive a competitive price for securities / derivatives contracts purchased or sold. There may be a risk of lower liquidity in some securities / derivatives contracts as compared to active securities / derivatives contracts. As a result, your

order may only be partially executed, or may be executed with relatively greater price difference or may not be executed at all.

1.2.1 Buying or selling securities / derivatives contracts as part of a day trading strategy may also result into losses, because in such a situation, securities / derivatives contracts may have to be sold / purchased at low / high prices, compared to the expected price levels, so as not to have any open position or obligation to deliver or receive a security / derivatives contract.

1.3 Risk of Wider Spreads:

Spread refers to the difference in best buy price and best sell price. It represents the differential between the price of buying a security / derivatives contract and immediately selling it or vice versa. Lower liquidity and higher volatility may result in wider than normal spreads for less liquid or illiquid securities / derivatives contracts. This in turn will hamper better price formation.

1.4 Risk-reducing orders:

The placing of orders (e.g., "stop loss" orders, or "limit" orders) which are intended to limit losses to certain amounts may not be effective many a time because rapid movement in market conditions may make it impossible to execute such orders.

1.4.1 A "market" order will be executed promptly, subject to availability of orders on opposite side, without regard to price and that, while the customer may receive a prompt execution of a "market" order, the execution may be at available prices of outstanding orders, which satisfy the order quantity, on price time priority. It may be understood that these prices may be significantly different from the last traded price or the best price in that security / derivatives contract.

1.4.2 A "limit" order will be executed only at the "limit" price specified for the order or a better price. However, while the customer receives price protection, there is a possibility that the order may not be executed at all.

1.4.3 A stop loss order is generally placed "away" from the current price of a stock / derivatives contract, and such order gets activated if and when the security / derivatives contract reaches, or trades through, the stop price. Sell stop orders are entered ordinarily below the current price, and buy stop orders are entered ordinarily above the current price. When the security / derivatives contract reaches the pre-determined price, or trades through such price, the stop loss order converts to a market/limit order and is executed at the limit or better. There is no assurance therefore that the limit order will be executable since a security / derivatives contract might penetrate the pre-determined price, in which case, the risk of such order not getting executed arises, just as with a regular limit order.

1.5 Risk of News Announcements:

News announcements that may impact the price of stock / derivatives contract may occur during trading, and when combined with lower liquidity and higher volatility, may suddenly cause an unexpected positive or negative movement in the price of the security / contract.

1.6 Risk of Rumors:

Rumors about companies / currencies at times float in the market through word of mouth, newspapers, websites or news agencies, etc. The investors should be wary of and should desist from acting on rumors.

1.7 System Risk:

High volume trading will frequently occur at the market opening and before market close. Such high volumes may also occur at any point in the day. These may cause delays in order execution or confirmation.

1.7.1 During periods of volatility, on account of market participants continuously modifying their order quantity or prices or placing fresh orders, there may be delays in order execution and its confirmations.

1.7.2 Under certain market conditions, it may be difficult or impossible to liquidate a position in the market at a reasonable price or at all, when there are no outstanding orders either on the buy side or the sell side, or if trading is halted in a security / derivatives contract due to any action on account of unusual trading activity or security / derivatives contract hitting circuit filters or for any other reason.

1.8 System/Network Congestion:

Trading on exchanges is in electronic mode, based on satellite/leased line based communications, combination of technologies and computer systems to place and route orders. Thus, there exists a possibility of communication failure or system problems or slow or delayed response from system or trading halt, or

any such other problem/glitch whereby not being able to establish access to the trading system/network, which may be beyond control and may result in delay in processing or not processing buy or sell orders either in part or in full. You are cautioned to note that although these problems may be temporary in nature, but when you have outstanding open positions or unexecuted orders, these represent a risk because of your obligations to settle all executed transactions.

2. As far as Derivatives segments are concerned, please note and get yourself acquainted with the following additional features:-

2.1 Effect of "Leverage" or "Gearing":

In the derivatives market, the amount of margin is small relative to the value of the derivatives contract so the transactions are 'leveraged' or 'geared'. Derivatives trading, which is conducted with a relatively small amount of margin, provides the possibility of great profit or loss in comparison with the margin amount. But transactions in derivatives carry a high degree of risk.

You should therefore completely understand the following statements before actually trading in derivatives and also trade with caution while taking into account one's circumstances, financial resources, etc. If the prices move against you, you may lose a part of or whole margin amount in a relatively short period of time. Moreover, the loss may exceed the original margin amount.

- A. Futures trading involve daily settlement of all positions. Every day the open positions are marked to market based on the closing level of the index / derivatives contract. If the contract has moved against you, you will be required to deposit the amount of loss (notional) resulting from such movement. This amount will have to be paid within a stipulated time frame, generally before commencement of trading on next day.
- B. If you fail to deposit the additional amount by the deadline or if an outstanding debt occurs in your account, the stock broker may liquidate a part of or the whole position or substitute securities. In this case, you will be liable for any losses incurred due to such close-outs.
- C. Under certain market conditions, an investor may find it difficult or impossible to execute transactions. For example, this situation can occur due to factors such as illiquidity i.e. when there are insufficient bids or offers or suspension of trading due to price limit or circuit breakers etc.
- D. In order to maintain market stability, the following steps may be adopted: changes in the margin rate, increases in the cash margin rate or others. These new measures may also be applied to the existing open interests. In such conditions, you will be required to put up additional margins or reduce your positions.
- E. You must ask your broker to provide the full details of derivatives contracts you plan to trade i.e. the contract specifications and the associated obligations.

2.2 Currency specific risks:

1. The profit or loss in transactions in foreign currency-denominated contracts, whether they are traded in your own or another jurisdiction, will be affected by fluctuations in currency rates where there is a need to convert from the currency denomination of the contract to another currency.
2. Under certain market conditions, you may find it difficult or impossible to liquidate a position. This can occur, for example when a currency is deregulated or fixed trading bands are widened.
3. Currency prices are highly volatile. Price movements for currencies are influenced by, among other things: changing supply-demand relationships; trade, fiscal, monetary, exchange control programs and policies of governments; foreign political and economic events and policies; changes in national and international interest rates and inflation; currency devaluation; and sentiment of the market place. None of these factors can be controlled by any individual advisor and no assurance can be given that an advisor's advice will result in profitable trades for a participating customer or that a customer will not incur losses from such events.

2.3 Risk of Option holders:

1. An option holder runs the risk of losing the entire amount paid for the option in a relatively short period of time. This risk reflects the nature of an option as a wasting asset which becomes worthless when it expires. An option holder who neither sells his option in the secondary market nor exercises it prior to its expiration will necessarily lose his entire investment in the option. If the price of the

underlying does not change in the anticipated direction before the option expires, to an extent sufficient to cover the cost of the option, the investor may lose all or a significant part of his investment in the option.

2. The Exchanges may impose exercise restrictions and have absolute authority to restrict the exercise of options at certain times in specified circumstances.

2.4 Risks of Option Writers:

1. If the price movement of the underlying is not in the anticipated direction, the option writer runs the risks of losing substantial amount.
2. The risk of being an option writer may be reduced by the purchase of other options on the same underlying interest and thereby assuming a spread position or by acquiring other types of hedging positions in the options markets or other markets. However, even where the writer has assumed a spread or other hedging position, the risks may still be significant. A spread position is not necessarily less risky than a simple 'long' or 'short' position.
3. Transactions that involve buying and writing multiple options in combination, or buying or writing options in combination with buying or selling short the underlying interests, present additional risks to investors. Combination transactions, such as option spreads, are more complex than buying or writing a single option. And it should be further noted that, as in any area of investing, a complexity not well understood is, in itself, a risk factor. While this is not to suggest that combination strategies should not be considered, it is advisable, as is the case with all investments in options, to consult with someone who is experienced and knowledgeable with respect to the risks and potential rewards of combination transactions under various market circumstances.

- 3. TRADING THROUGH WIRELESS TECHNOLOGY/ SMART ORDER ROUTING OR ANY OTHER TECHNOLOGY:** Any additional provisions defining the features, risks, responsibilities, obligations and liabilities associated with securities trading through wireless technology/ smart order routing or any other technology should be brought to the notice of the client by the stock broker.

We refer to the **SEBI circular No. CIR/HO/MIRSD/DOP/CIR/P/2019/75** on "Handling of Clients" Securities by trading Members/ Clearing Members" dated June 20, 2019 read in line with the updated FAQ's dated 27th Sep 2019, which will be in effect from 1st October 2019. To view this circular SEBI Circular it has necessitated a change in policy and procedures with respect to retention/ handling of securities and square off policy. We hereby communicate the modification in our existing policies and procedures.

Securities handling/retention policy:

1) Entire Securities received in settlement payout will be transferred to the client beneficiary owner

account(BO), if the total amount outstanding from the client is realized in full by way of receipt of clear funds, considering the future obligation of unsettled transaction and margin payable on the same.

- 2) In case of partial payment, all the securities shall be retained, however, based on client instruction subject to retention of securities as a collateral for the amount outstanding, excess securities will be transferred to client BO account after applying prevailing hair cut as per scrip category as determined by WBPL.
 - 3) (a) Clients securities may be transferred to the CLIENT BENEFICIERY a/c via direct payout or transferred to the " Client Unpaid Securities Account" (CUSA) depending on the discretion of the stock broker. No securities shall be kept in the CUSA beyond 5 days from the date of payout.
(b) We may, however, at our discretion, transfer the unpaid securities to Client BO account in case the client is having BO account with WBPL and has executed POA of the demat account for transferring securities against obligation, in favour of WBPL.
 - 4) In the event of non-payment, within 5 trading days from the date of pay-out, in proportion to the amount not received and after taking into account any amount lying to the credit of the client, it will be the Broker's discretion to either DISPOSE - OFF/SELL the securities. The balance shall be transferred to the Client Beneficiary Account.
 - 5) As the SEBI Circular No.CIR/HO/MIRSD/DOP/CIR/P/2019/75 dated June 20th, 2019 read in line with the updated FAQ's dated 27th Sep 2019 mandates liquidation of securities in case of non-payment within 5 working days from the pay-out date, NO PRE-ORDER TRADE CONFIRMATION is required for the same. The Shares lying in the CUSA shall be sold based on RMS policy of Company.
 - 6) The client may want to sell some other securities lying in their respective demat account within the 5 days from the payout instead of the securities lying in the CUSA. In this case the client shall do an EARLYPAYIN of these securities to the "Pool Account" of the Broker and give a written consent duly signed by the Trading Account holder for the same. Only after these securities are disposed-off and the formalities are completed to the satisfaction of WBPL, the securities in the CUSA shall be transferred to the "Client Beneficiary Account".
 - 7) It shall be noted that WBPL shall not allow the client to initiate a buy trade as further exposure shall not be allowed if the old debit is not realized in full by way of receipt of clear funds in the bank account of WBPL or by way of realized payout as a result of liquidation by the Trading Member read in line with the para 2(d) of the SEBI Circular ref No.CIR/HO/MIRSD/DOP/CIR/P/2019/75 dated June 20th 2019 and the FAQ dated 27/09/2019 pt 19 page 7.
 - 8) "Client Securities Margin Pledge Account" shall be used for the purpose of holding clients securities for margin purposes. Excess securities (in the form of margin pledge) or any cash equivalent collateral deposited with CC on behalf of client, after adjustment of the 225% of margin liability, need not be unpledged while settling the account.
 - 9) In case there is a shortfall after the selling of securities from the CUSA the client shall be liable to pay the balance.
 - 10) In exceptional scenario, where inter-depository transfer is not available i.e. SGB, G-sec,... the client will have to open an account in the relevant Depository.
 - 11) Securities offered as margin/collateral will remain in the account of the client and can be pledged to WBPL by way of 'margin pledge', created in the Depository system.
- f. Shortages in obligations arising out of internal netting of trades:
Internal short deliveries are not covered by the Auction conducted on the NSE. It is due to this limitation on the NSE we follow the procedure as mentioned below:
- The client may not receive shares on T + 2 in case there is an internal shortage situation within WBPL, i.e. the buyer and seller are both WBPL's clients and seller defaults in delivery due to which the buyer may not receive the shares.
 - In case there is an internal shortage in NSE, the exchange conducts an auction through which the shares would be purchased and delivered to the buyer. The seller would be debited at the rate at which the exchange would have purchased these shares. Additionally, brokerage statutory costs and other incidental charges including penalty for non-delivery may be debited to the client. In case, the exchange is unable to purchase these shares, the exchange will inform WBPL of a close out rate, at which the buyer would be allowed credit and the seller would be debited for the same amount. In case of any corporate action for internal shortages, if original trade was executed at cum rate, then WBPL will repurchase the shares at ex-rate in its internal shortage a/c. The amount/quantity of corporate action as applicable will be debited to seller's account and will be credited to buyer's account. In case of security being delisted from trading/ unable to buy on account of corporate account, WBPL will close out internal shortage at last traded price/ last traded cum rate price + 10% (credit to buyer and debit to seller)

- In case there is an internal shortage in NSE, WBPL purchases the shares from the normal market and provides the shares to the buyer on receipt of delivery. The defaulting seller would be debited with the rate at which these shares were purchased, including the brokerage statutory charges and other incidental charges including penalty if any. In case of non receipt of delivery to purchase the shares, the buyer would be offered credit at a close out rate applicable on T+4 day + 3% or and the new seller would be debited at the same rate. In case where WBPL is unable to purchase the shares on account of the scrip being in buying circuit, the position would then be closed out on the closing price of the exchange on T+2 at the circuit percentage of 2 days (Maximum up to 20% .) In case of any corporate action for internal shortage if original trade was executed at cum -rate then WBPL will repurchase the share at ex rate in its internal shortage account. - WBPL may also levy charges on the defaulting seller for non-delivery of stocks within the stipulated time.

6. Shortage in obligations arising out of internal netting of trades:

WBPL, as a member of exchange delivers/receives securities to/from exchanges on net obligation basis in respect of a settlement.
